## SEMICONDUCTORS

### MOSFETs and ICs Segment

#### MOSFETs

- Low-Voltage TrenchFET® Power MOSFETs
- Medium-Voltage Power MOSFETs
- High-Voltage Planar MOSFETs
- High-Voltage Super Junction MOSFETs
- Automotive-Grade MOSFETs

#### ICs

- Power Management and Power Control ICs
- Smart Load Switches
- Analog Switches and Multiplexers

### Diodes Segment

#### Rectifiers

- Schottky Rectifiers
- Ultra-Fast Recovery Rectifiers
- Standard and Fast Recovery Rectifiers
- High-Power Rectifiers/Diodes
- Bridge Rectifiers

#### Small-Signal Diodes

- Schottky and Switching Diodes
- Zener Diodes
- Tuner/Capacitance Diodes
- Bandswitching Diodes
- RF PIN Diodes

#### Protection Diodes

- TVS Diodes or TRANSZORB®  
(unidirectional, bidirectional)
- ESD Protection Diodes (including arrays)

#### Thyristors/SCRs

- Phase-Control Thyristors
- Fast Thyristors

#### Power Modules

- Input Modules  
(diodes and thyristors)
- Output and Switching Modules  
(contain MOSFETs, IGBTs, and diodes)
- Custom Modules

### Optoelectronic Components Segment

#### Infrared Emitters and Detectors

- Optical Sensors
- Infrared Remote Control Receivers
- Optocouplers

- Phototransistor, Photodarlington

- Linear

- Phototriac

- High-Speed

- IGBT and MOSFET Driver

#### Solid-State Relays

- LEDs and 7-Segment Displays
- Infrared Data Transceiver Modules
- Custom Products

## PASSIVE COMPONENTS

### Resistors and Inductors Segment

#### Film Resistors

- Metal Film Resistors
- Thin Film Resistors
- Thick Film Resistors
- Power Thick Film Resistors
- Metal Oxide Film Resistors
- Carbon Film Resistors

#### Wirewound Resistors

- Vitreous, Cemented, and Housed Resistors
- Braking and Neutral Grounding Resistors
- Custom Load Banks

#### Power Metal Strip® Resistors

#### Battery Management Shunts

#### Chip Fuses

#### Variable Resistors

- Cermet Variable Resistors
- Wirewound Variable Resistors
- Conductive Plastic Variable Resistors
- Contactless Potentiometers

#### Networks/Arrays

#### Non-Linear Resistors

#### NTC Thermistors

#### PTC Thermistors

#### Varistors

#### Magnetics

- Inductors
- Transformers
- Coils

#### Connectors

### Capacitors Segment

#### Tantalum Capacitors

- Molded Chip Tantalum Capacitors
- Coated Chip Tantalum Capacitors
- Solid Through-Hole Tantalum Capacitors
- Wet Tantalum Capacitors

#### Ceramic Capacitors

- Multilayer Chip Capacitors
- Disc Capacitors

#### Film Capacitors

#### Power Capacitors

#### Heavy-Current Capacitors

#### Aluminum Capacitors

## **DISCLAIMER**

ALL PRODUCT, PRODUCT SPECIFICATIONS AND DATA ARE SUBJECT TO CHANGE WITHOUT NOTICE TO IMPROVE RELIABILITY, FUNCTION OR DESIGN OR OTHERWISE.

Vishay Intertechnology, Inc., its affiliates, agents, and employees, and all persons acting on its or their behalf (collectively, "Vishay"), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product.

Vishay makes no warranty, representation or guarantee regarding the suitability of the products for any particular purpose or the continuing production of any product. To the maximum extent permitted by applicable law, Vishay disclaims (i) any and all liability arising out of the application or use of any product, (ii) any and all liability, including without limitation special, consequential or incidental damages, and (iii) any and all implied warranties, including warranties of fitness for particular purpose, non-infringement and merchantability.

Statements regarding the suitability of products for certain types of applications are based on Vishay's knowledge of typical requirements that are often placed on Vishay products in generic applications. Such statements are not binding statements about the suitability of products for a particular application. It is the customer's responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application. Parameters provided in datasheets and/or specifications may vary in different applications and performance may vary over time. All operating parameters, including typical parameters, must be validated for each customer application by the customer's technical experts. Product specifications do not expand or otherwise modify Vishay's terms and conditions of purchase, including but not limited to the warranty expressed therein.

Except as expressly indicated in writing, Vishay products are not designed for use in medical, life-saving, or life-sustaining applications or for any other application in which the failure of the Vishay product could result in personal injury or death. Customers using or selling Vishay products not expressly indicated for use in such applications do so at their own risk and agree to fully indemnify and hold Vishay and its distributors harmless from and against any and all claims, liabilities, expenses and damages arising or resulting in connection with such use or sale, including attorneys fees, even if such claim alleges that Vishay or its distributor was negligent regarding the design or manufacture of the part. Please contact authorized Vishay personnel to obtain written terms and conditions regarding products designed for such applications.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted by this document or by any conduct of Vishay. Product names and markings noted herein may be trademarks of their respective owners.

# Low Voltage Power Capacitors

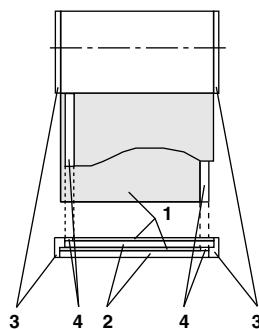

## GENERAL TECHNICAL INFORMATION

### MKP-TECHNOLOGY

Capacitors are used in many diverse applications, and many different capacitor technologies are available. In low voltage applications, MKP-type capacitors which are made in accordance with metallized polypropylene technology have proved to be most appropriate and also the most cost effective. Dependent on the nominal voltage of the capacitor, the thickness of the polypropylene film will differ.

### MKP-TYPE CAPACITOR

(metallized polypropylene film)

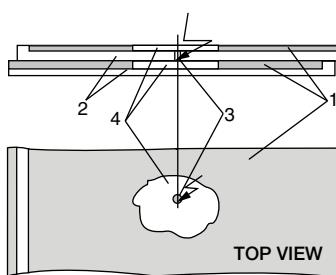

#### Design of a MKP-type capacitor

- 1 Electrodes (metallized)
- 2 Polypropylene film
- 3 Electric contact (schooping)
- 4 Non-metallized edge

### SELF-HEALING

At the end of service life, or due to inadmissible electrical or thermal overload, an insulation breakdown may occur. A breakdown causes a small arc which evaporates the metal layer around the point of breakdown and re-establishes the insulation at the place of perforation. After electric breakdown, the capacitor can still be used. The decrease of capacitance caused by a self-healing process is less than 100 pF. The self-healing process lasts for a few microseconds only and the energy necessary for healing can be measured only by means of sensitive instruments.

#### Self-healing breakdown

- 1 Electrodes (metallized)
- 2 Polypropylene film
- 3 Point of breakdown
- 4 Non-conductive insulating area

### FILLING AGENT

#### ESTAprop

ESTAprop MKP-type capacitors are filled with a natural oil. The highly fire-resistant insulation oil on vegetable base (flash point 285 °C, ignition point 315 °C) is fully biodegradable and non-toxic.

After an extended drying period, the filling of the capacitor casing with oil is carried out under high vacuum for removal of moisture. Following this process, the capacitor will be hermetically sealed. This process ensures excellent heat dissipation and constant capacitance over full service life.

#### ESTAdry

ESTAdry MKP-type capacitors are "dry". That is, after the extended drying period and before the hermetic sealing of the casing, a non-liquid filling agent is used instead of natural oil. In case of tubular cans, it is an environmentally friendly inert gas-filling to avoid corrosion of the winding elements and inner electric contacts. For larger dry capacitors, e.g. the D-type capacitors or the DW-type filter capacitors, the filling agent is a resin.

A little "g" shows the difference in the type designation between the oil-filled (PhMKP) and the dry version (PhMKPg).

Both versions comply with the highest temperature class D, specified by the standards.

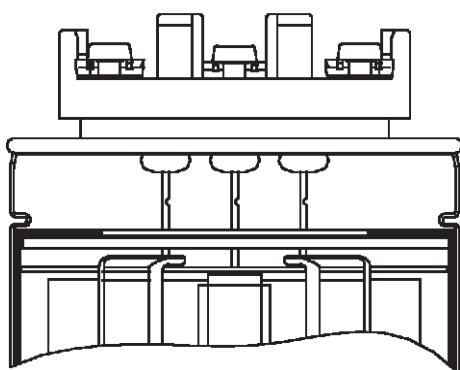

### PROVIDING THE WINDING ELEMENT WITH ELECTRIC CONTACTS

For ESTAprop and ESTAdry MKP-type capacitors, metallized electrodes are used. A winding element consists of two displaced polypropylene films, wound together. The front surface of the winding elements is joined by means of a metal spray process. This process is called schooping. Due to the displacement of the two polypropylene films, only one film will be electrically connected on one side of the element. The terminal leads can be soldered onto this sprayed metal surface.

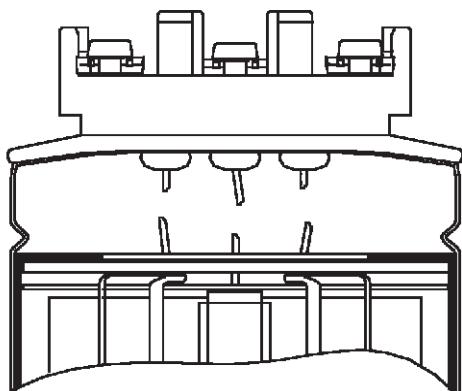

### OVERPRESSURE TEAR-OFF FUSE

#### OPERATING CONDITION

At the end of service life, due to inadmissible electrical or thermal overload, an overpressure builds up and causes an expansion of the cover. Expansion over a certain limit causes the tear-off of the internal fuses. The active capacitor elements are thus cut off from the source of supply. The pressure within the casing separates the breaking point so rapidly that no harmful arc can occur.

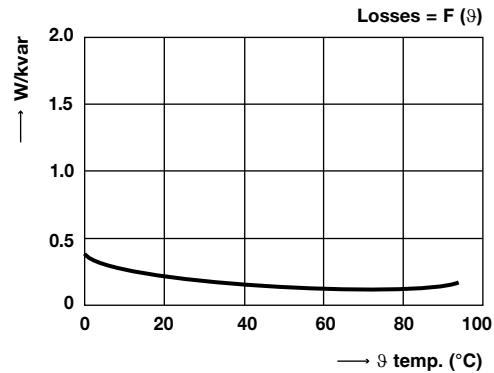

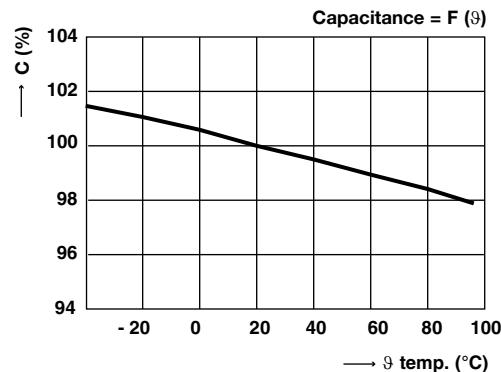

#### TORN-OFF CONDITION

### CHARACTERISTICS OF DIELECTRIC

#### MKP-POLYPROPYLENE, METALLIZED

#### CE-MARKING

- ESTAprop      Low voltage capacitors conform  
 ESTAdry        with the regulations of the following  
                   European directive:  
 73/23 EEC      Low Voltage Directive  
 All ESTAprop and ESTAdry low voltage power factor  
 correction capacitors are supplied with CE-marking.

#### UL- AND ULC-MARKING

ESTAprop and ESTAdry cylindrical type capacitors have been tested and approved by independent laboratories such as Underwriters Laboratories Inc. (UL). ESTAprop and ESTAdry low voltage capacitors conform with UL standard 810 and Canadian standard C 22.2. UL and ULC marks are included in standard component marking.

## Low Voltage Power Capacitors

### **TERMS AND DEFINITIONS, APPLICABLE STANDARDS**

ESTAprop and ESTAdry power factor correction capacitors are designed to VDE 0560-46 + 47, IEC 60831-1 + 2 and EN 60831-1 + 2, latest edition.

#### **DEFINITION OF RATINGS**

|          |  |
|----------|--|
| $U_{cn}$ | Rated voltage: The RMS value of the alternating voltage ...                                    |
| $I_n$    | Rated current: The RMS value of the alternating current ...                                    |
| $C_n$    | Rated capacitance: The capacitance value ...<br>... for which the capacitor has been designed. |

#### **MAXIMUM PERMISSIBLE CURRENT**

ESTAprop and ESTAdry MKP-type capacitors are suitable for continuous operation at an RMS line current of 1.3 times the fundamental current that occurs at rated sinusoidal

voltage and rated frequency, excluding transients. Taking into account a previous capacitance tolerance of  $1.15 \times C_n$ , the maximum current can reach  $1.5 \times I_n$ .

These overcurrent factors are intended to take into account the combined effects of harmonics, overvoltages and capacitance tolerance.

#### **MAXIMUM PERMISSIBLE VOLTAGE**

ESTAprop and ESTAdry MKP-type capacitors are suitable for operation at voltage levels as indicated in the table (extract from IEC 60831-1 clause 20 - table 3) below:

| FREQUENCY RMS                 | VOLTAGE FACTOR<br>$U_{cn}$ | MAXIMUM DURATION   | OBSERVATION   |
|-------------------------------|----------------------------|--|---|
| Power frequency               | 1.0                        | Continuous   | Highest average value during any period of capacitor energization |
| Power frequency               | 1.10                       | 8 h in every 24 h  | System voltage regulation and fluctuations                        |
| Power frequency               | 1.15                       | 30 min in every 24 h   | System voltage regulation and fluctuations                        |
| Power frequency               | 1.20                       | 5 min (only 200 times in the life of the capacitor)          | Voltage rise at light load  |
| Power frequency               | 1.30                       | 1 min (only 200 times in the life of the capacitor)          |   |
| Power frequency and Harmonics |                            | Such that the current does not exceed the value given above. |   |

#### **HARMONIC DISTORTION**

Capacitors can be overloaded in networks distorted by harmonics. This situation is even more critical in the case of resonance. Where the capacitor current or voltage can be a few times as high as the nominal voltage. Therefore, special precautions (e.g. series filter circuit reactors) should be taken in networks distorted by harmonics. Our warranty only applies for operating conditions in accordance with the above mentioned standards.

#### **DAMPING OF INRUSH CURRENT**

Switching devices especially suited for capacitor switching shall be used. For example, the device shall be such that restriking during breaking operations, which may result in high overvoltages, cannot occur.

The operating experience of ESTAprop MKP-type capacitors since their introduction in 1978 has shown their excellent behavior when being switched.

High output densities and reduction of losses have resulted in reduced resistance of modern MKP-type capacitors. Especially switching capacitors in parallel to others being already energized, cause very high inrush currents which

should be reduced to  $\leq 100 \times I_n$  (according to standard). As a consequence, the life cycle of contactors and also capacitors will be affected.

In case of detuned capacitor banks, the inrush current will be limited by the inductivity of the series filter reactors.

For capacitor banks without filter reactors, we recommend the use of capacitor contactors with series resistors.

We recommend these special contactors instead of damping the inrush current by coiling up the connection cable between contactor and capacitor. This is due to superior damping behavior and reduced losses in connecting cables, resulting in temperature reduction inside the cubicle.

#### **Contactors have to be replaced after about 100 000 switching operations.**

Modern PFC controllers are able to memorize the switching number per capacitor step.

A regular check of the contactors is strongly recommended.

### OPERATING TEMPERATURES

Capacitors are classified for ambient temperature categories, each category being specified by a number followed by a letter. The number represents the lowest ambient-air temperature at which the capacitor may be operated.

The letter represents upper limit of operating temperature, having maximum values specified in the table below.

|   | AMBIENT TEMPERATURE °C |                      |        |  |
|---|------------------------|----------------------|--------|--|
|   | MAXIMUM                | MAXIMUM AVERAGE OVER |        |  |
|   |                        | 24 h                 | 1 YEAR |  |
| A | 40                     | 30                   | 20     |  |
| B | 45                     | 35                   | 25     |  |
| C | 50                     | 40                   | 30     |  |
| D | 55                     | 45                   | 35     |  |

ESTAprop and ESTAdry, PhMKP-type, cylindrical capacitors are designed for category: -25/D (ESTAprop), -40/D (ESTAdry)

### DEGREE OF PROTECTION, IP CODE

Degrees of protection are described by the IP code. The designation consists of the letters "IP" followed by two characteristic figures, e.g. "IP00" means no protection.

The first characteristic figure indicates that:

- the enclosure provides protection of persons against access to hazardous parts by preventing or limiting the ingress of a part of the human body or an object held by a

person; and simultaneously

- the enclosure provides protection of equipment against the ingress of solid foreign objects.

The second characteristic figure indicates the degree of protection provided by enclosures with respect to harmful effects on the equipment due to the ingress of water.

| CHARACTERISTIC NUMERICAL | 1 <sup>ST</sup>  | 2 <sup>ND</sup>  |
|--------------------------|--|--|
|                          | PROTECTION AGAINST ACCESS TO HAZARDOUS PARTS AND PENETRATION OF SOLID FOREIGN OBJECTS INCLUDING DUST | PROTECTION AGAINST INGRESS OF WATER  |
| 0                        | No protection  | No protection  |
| 1                        | Protected against solid foreign objects of 50 mm Ø and greater                                       | Protected against vertically falling water drops                                 |
| 2                        | Protected against solid foreign objects of 12.5 mm Ø and greater                                     | Protected against vertically falling water drops when enclosure tilted up to 15° |
| 3                        | Protected against solid foreign objects of 2.5 mm Ø and greater                                      | Protected against spraying water   |
| 4                        | Protected against solid foreign objects of 1 mm Ø and greater  | Protected against splashing water  |
| 5                        | Dust-protected   | Protected against water jets   |
| 6                        | Dust-tight   | Protected against powerful water jets  |

## Low Voltage Power Capacitors

### CAPACITOR SELECTION TABLE FOR POWER FACTOR CORRECTION OF ELECTRICAL MOTORS

Reactive power is required by an asynchronous motor for the magnetic field. The amount of reactive power consumption of a motor depends on various parameters such as power rating, loading, rated speed, and design. The capacitor output should be maximum 90 % of the apparent power of a asynchronous motor under no-load conditions.

This is important to avoid dangerous self excitation of the motor. A measurement of the motor current under no-load conditions can be easily performed or may be obtained from the manufacturer.

| GUIDELINE VALUES FOR CAPACITOR SELECTION |   |
|--|---|
| MOTOR POWER RATING kW                    | CAPACITOR OUTPUT SELECTION kvar           |
| Up to 3.9                                | Approximately 55 % of nominal motor power |
| 4.0 to 4.9                               | 2   |
| 5.0 to 5.9                               | 2.5                                       |

| 18.0 to 21.9                             | 7.5                                       |
| 22.0 to 29.9                             | 10  |
| 30.0 and above                           | Approximately 35 % of nominal motor power |

### CAPACITOR SELECTION TABLE FOR POWER FACTOR CORRECTION OF TRANSFORMERS

For power factor correction of transformers only the no-load reactive power has to be covered. The required capacitor output for three-phase transformers depends on the short-circuit voltage and is between 3 % and 12 % of the rated transformer output. In case harmonics are present on the high voltage side, the capacitor can form a series resonance circuit with the inductance of the transformer. Therefore the capacitor output has to be selected very carefully together with power utilities and the transformer manufacturer. The following formula can be used to check whether a certain capacitor output will create

problems for specific harmonic orders on high voltage side:

$$n = \sqrt{S/Q_C}$$

n = Harmonic order

Q<sub>C</sub> = Rated capacitor output in kvar

S = Short circuit power at the point of capacitor connection in kVA

| GUIDELINE VALUES FOR CAPACITOR SELECTION |  |                |                |
|--|--|----------------|----------------|
| TRANSFORMER RATING<br>kVA                | CAPACITOR OUTPUT IN kvar AT TRANSFORMER PRIMARY VOLTAGES |                |                |
|  | 5 KV TO 10 KV  | 15 KV TO 20 KV | 25 KV TO 30 KV |
| 50                                       | 4.0  | 5.0            | 6.0            |

### CALCULATION AND SELECTION OF REQUIRED CAPACITOR RATING

$$Q_C = P \times (\tan \varphi_1 - \tan \varphi_2) = P \times (\tan \arccos \cos \varphi_1 - \tan \arccos \cos \varphi_2)$$

$Q_C$  = Required capacitor output (kvar)

P = Real power (kW)

$\varphi_1$  = Phase angle of actual power factor

$\varphi_2$  = Phase angle of target power factor

$\cos \varphi_1$  = Actual power factor

$\cos \varphi_2$  = Target power factor

The table below shows the values for typical power factors according to the formula "tan  $\varphi_1$  - tan  $\varphi_2$ ":

|                     | TARGET POWER FACTOR |      |      |      |      |      |      |      |      |      |
|---------------------|---------------------|------|------|------|------|------|------|------|------|------|
|                     | 0.70                | 0.75 | 0.80 | 0.85 | 0.90 | 0.92 | 0.94 | 0.96 | 0.98 | 1.00 |
| ACTUAL POWER FACTOR |                     |      |      |      |      |      |      |      |      |      |
| 0.40                | 1.27                | 1.41 | 1.54 | 1.67 | 1.81 | 1.87 | 1.93 | 2.00 | 2.09 | 2.29 |
| 0.45                | 0.96                | 1.10 | 1.23 | 1.36 | 1.50 | 1.56 | 1.62 | 1.69 | 1.78 | 1.98 |
| 0.50                | 0.71                | 0.85 | 0.98 | 1.11 | 1.25 | 1.31 | 1.37 | 1.44 | 1.53 | 1.73 |
| 0.55                | 0.50                | 0.64 | 0.77 | 0.90 | 1.03 | 1.09 | 1.16 | 1.23 | 1.32 | 1.52 |
| 0.60                | 0.31                | 0.45 | 0.58 | 0.71 | 0.85 | 0.91 | 0.97 | 1.04 | 1.13 | 1.33 |
| 0.65                | 0.15                | 0.29 | 0.42 | 0.55 | 0.68 | 0.74 | 0.81 | 0.88 | 0.97 | 1.17 |
| 0.70                | 0.00                | 0.14 | 0.27 | 0.40 | 0.54 | 0.59 | 0.66 | 0.73 | 0.82 | 1.02 |
| 0.75                |                     | 0.00 | 0.13 | 0.26 | 0.40 | 0.46 | 0.52 | 0.59 | 0.68 | 0.88 |
| 0.80                |                     |      | 0.00 | 0.13 | 0.27 | 0.32 | 0.39 | 0.46 | 0.55 | 0.75 |
| 0.85                |                     |      |      | 0.00 | 0.14 | 0.19 | 0.26 | 0.33 | 0.42 | 0.62 |
| 0.90                |                     |      |      |      | 0.00 | 0.06 | 0.12 | 0.19 | 0.28 | 0.48 |

The required capacitor output may be calculated as follows:

select the factor k

(matching point of actual and target power factor)

calculate the required capacitor rating with the formula:

$$Q_C = k \times P$$

Example: Actual power factor = 0.70

Target power factor = 0.96

Real power P = 35 kW

Capacitor output  $Q_C$  = ?

$$Q_C = k \times P = 0.73 \times 35 \text{ kW} = 25.5 \text{ kvar}$$

Capacitor output in case of voltage and/or frequency different to the capacitor nominal voltage:

$$Q_{\text{new}} = \left( \frac{U_{\text{new}}}{U_{\text{cn}}} \right)^2 \times \frac{f_{\text{new}}}{f_{\text{cn}}} \times Q_{\text{cn}}$$

Note  $U_{\text{new}} < U_{\text{cn}}$

$U_{\text{new}}$  = Supply voltage the capacitor is required for

$f_{\text{new}}$  = Frequency the capacitor is required for

$Q_{\text{new}}$  = Capacitor output at  $U_{\text{new}}$  and  $f_{\text{new}}$

$U_{\text{cn}}$  = Rated capacitor voltage

$f_{\text{cn}}$  = Rated capacitor frequency

$Q_{\text{cn}}$  = Rated capacitor output at  $U_{\text{cn}}$  and  $f_{\text{cn}}$

## DISCHARGE RESISTORS

ESTAprop MKP-type capacitors will be provided complete with discharge resistors. After the capacitor is disconnected from the source of supply, discharge resistors are required for discharging each unit within 3 min to 75 V or less from initial nominal peak voltage (according IEC-standard 60831-1 + 2). Discharge resistors have to be connected directly to the capacitors. There shall be no switch, fuse cut-out, or any other isolating device between the capacitor unit and the discharge resistors.

Annotation: Our capacitors are discharged to 50 V or less within 1 min to comply also with UL standard 810.

## MINIMUM REQUIRED POWER RATING OF THE RESISTORS (W)

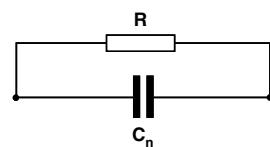

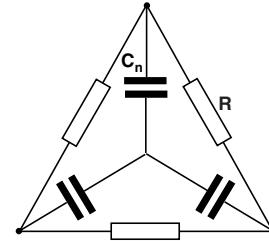

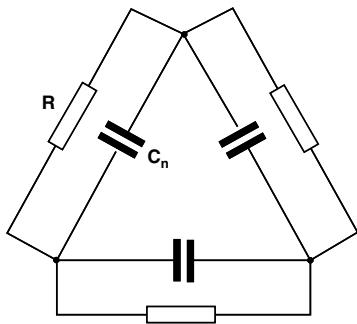

$$P = \frac{U^2}{R}$$

### MAXIMUM RESISTOR VALUE

$$R \leq \frac{60 \text{ s}}{C_n \times I_n \left( \frac{U_n \times \sqrt{2}}{50 \text{ V}} \right)}$$

### MAXIMUM RESISTOR VALUE

$$R \leq \frac{60 \text{ s}}{1/3 \times C_n \times I_n \left( \frac{U_n \times \sqrt{2}}{50 \text{ V}} \right)}$$

**Example:** PhMKP 400.3.25  
(Delta Connection)

$$C_n = 165.8 \mu\text{F}$$

$$\Rightarrow R \leq \frac{60 \text{ s}}{165.8 \times 10^{-6} \text{ F} \times I_n \left( \frac{400 \text{ V} \times \sqrt{2}}{50 \text{ V}} \right)}$$

$$R \leq 149.1 \text{ k}\Omega$$

(a thick film discharge resistor with 145 kΩ is used)

### Note

- Attention: Terminals have to be short-circuited before handling.

### CROSS SECTION OF CONNECTING CABLE BETWEEN MAIN SUPPLY AND CAPACITOR BANK, FUSE RATING

Cross section for connecting cable and fuse rating have to be selected in accordance with the standard VDE 0100 part 523. Values mentioned below are guideline values valid for operation under normal conditions and at an ambient

temperature of 40 °C. Higher values shall be selected if conditions differ from normal (e.g. high harmonic distortion or higher ambient temperature).

| OUTPUT<br>kvar | RATED VOLTAGE 230 V, 50 Hz |           |                           | RATED VOLTAGE 400 V, 50 Hz |           |                           | VOLTAGE 415 V, 50 Hz  |           |                           |

### CAPACITOR BANK INTERNAL WIRING

The internal wiring of capacitor banks can be normally done with a lower cross section. Various parameters such as cabinet inside temperature, quality of cable, maximum cable isolation temperature, single or multicore cable, and temperature rating have to be taken into consideration for selection of the appropriate value.

The contrary requirement for limiting the inrush current and reduction of cable losses is another important aspect in this matter if no inrush current limiting devices are used.

### CALCULATION OF THE REQUIRED RATED CAPACITOR OUTPUT IN DETUNED FILTER CIRCUITS (FACTORS TO BE MULTIPLIED WITH THE REQUIRED OUTPUT PER STEP)

| <b>SUPPLY VOLTAGE 400 V</b>                       |                      |       |       |       |       |       |       |
|---|----------------------|-------|-------|-------|-------|-------|-------|
| RATED VOLTAGE <sup>(1)</sup><br>OF CAPACITOR<br>V | DETUNING FACTOR IN % |       |       |       |       |       |       |

| <b>SUPPLY VOLTAGE 480 V</b>                       |                      |       |       |       |       |       |       |
|---|----------------------|-------|-------|-------|-------|-------|-------|
| RATED VOLTAGE <sup>(1)</sup><br>OF CAPACITOR<br>V | DETUNING FACTOR IN % |       |       |       |       |       |       |
|   | 5                    | 5.5   | 6     | 7     | 12.5  | 13    | 14    |
| 525   | 1.136                | 1.130 | 1.125 | 1.113 | -     | -     | -     |
| 660   | 1.796                | 1.787 | 1.777 | 1.758 | 1.654 | 1.645 | 1.626 |

#### Example:

Required output per step at supply voltage: 50 kvar

Supply voltage: 400 V

Detuning factor: 7 %

Rated voltage of the capacitor: 440 V

Factor of the table: 1.125

Required rated output of the capacitors:  $50 \text{ kvar} \times 1.125 = 56.25 \text{ kvar}$

Selection: for instance: 2 x PhMKP 440.3.28, 1

#### Note

- <sup>(1)</sup> For filter circuits the capacitor rated voltage has to be chosen always higher than the supply voltage.  
i.e.: Fundamental voltage increased by the reactor and harmonics.

## LVAC Power Capacitors

### FEATURES

- Self-healing technology
- Over pressure tear-off fuse
- Aluminum case
- Excellent heat dissipation
- Various design options: Slim diameter or low height, screw terminal IP00 or terminal block IP20
- Two versions available: Oil-filled and dry, gas filled
- UL and cUL approved

### APPLICATIONS

- For applications 1-phase or 3-phase  $\leq 1000$  VAC<sub>RMS</sub>
- Free standing, fixed individual-PFC (e.g. motors, lighting, transformers)
- Automatic central-PFC (e.g. group of loads)
- Harmonic trap (e.g. UPS, frequency drives, converter)

## CAPACITORS IN CYLINDRICAL CASING

### APPLICATION

The Vishay ESTA PhMKP/PhMKPg series of power factor correction capacitors in cylindrical aluminum casing now provide higher kvar/voltage combinations for use in low-voltage systems.

The newly available 116 mm and 136 mm diameter capacitors complete the successful range of compact and slim cylindrical capacitors of 64 mm and 84.4 mm diameter design up to the lowest outputs of the triangular can design of the PhMKDg model.

The 116 mm and 136 mm start where the output of the 84 mm design ends. At the point of change, the customer has two options: the lower height profile of the 116 mm and 136 mm or the slimmer diameter of the 84.4 mm design.

The Vishay ESTA LVAC capacitors are suitable for use in both standard PFC applications and in heavy-duty applications such as wind turbines:

- automatic PFC-equipment
- individual fixed PFC (e.g. motors, transformers, lighting)
- group fixed PFC
- tuned and detuned capacitor banks
- harmonic filters (e.g. UPS, frequency drives, converter)

### DESIGN

The Vishay ESTA LVAC MKP capacitors are metallized polypropylene film capacitors with self-healing properties. The current carrying metal layer of an MKP capacitor is vaporised onto one side of the polypropylene film. The front surface of tubular winding elements are joined by means of the metal spray method (scooping). Three winding elements are encapsulated in one aluminum casing and connected to form a true 3-phase capacitor. The overpressure tear-off fuse prevents the capacitor from bursting at the end of service life, or due to inadmissible electrical or thermal overloads.

The capacitor is housed in a tubular aluminum container with a aluminum lid press-rolled onto it (64 mm and 84.4 mm) or welded (116 mm and 136 mm). The current is supplied via IP00 screw-on (M5) or IP20 block type safety terminal. A threaded stud (M12) at the bottom of the container serves for both grounding and mounting.

The Vishay ESTAprop and ESTAdry capacitors will be delivered together with discharge resistors and hardware for mounting and connection.

Vishay ESTA standard capacitors of 64 mm, 84.4 mm, 116 mm and 136 mm diameter will be delivered together with a thickfilm discharge resistor unit and fixing material for easy mounting and connection. In 84.4 mm diameter IP00 design there is also an option for feed-through (IN-LINE) connection of the capacitors to the supply.

The entire range of Vishay ESTA LVAC products are offered in both natural oil-filled ESTAprop PhMKP and gas-filled ESTAdry PhMKPg versions.

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKP-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

<sup>(1)</sup> Version no. xx may differ as it respects small changes, e.g. on the label

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKP-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

<sup>(1)</sup> Version no. xx may differ as it respects small changes, e.g. on the label

**Terminal cover (IP20), available for 84.4 mm diameter tubular can type capacitors.**

**(Cable gland not available for use with these covers)**

| <b>TYPE</b>      | <b>ARTICLE NO.</b>    | <b>CAPACITOR Ø IN mm</b> |
|------------------|-----------------------|--------------------------|
| CAP84-88-IN-LINE | 5341-COV-84-88-IP20-7 | 84.4                     |

**Type CAP84-88-IN-LINE**

- Protection class IP20
- Protective cover prevents unintentional touching of live terminals
- Proper ventilation is provided by use of additional holes in the protective cover's top
- Six slots located on the cover, three on each side, allow easy IN-LINE connection between two

**TERMINAL COVER IP20: CAP84-IN-LINE**

**IN-LINE CONNECTION BETWEEN TWO CAPACITORS, IP20**

**3-PHASE CAPACITORS**
**IP20, OIL**

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKP-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

(1) Version no. xx may differ as it respects small changes, e.g. on the label

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKP-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

(1) Version no. xx may differ as it respects small changes, e.g. on the label

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKP-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

<sup>(1)</sup> Version no. xx may differ as it respects small changes, e.g. on the label

**3-PHASE CAPACITORS**
**IP20, OIL**
**RATED VOLTAGE 660 V, 50 Hz, 64/84: DELTA CONNECTION, 116/136: STAR CONNECTION,  
UL/ULC UP TO 660 V**
**CAN BE USED ALSO FOR 690 V**

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKP-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

(1) Version no. xx may differ as it respects small changes, e.g. on the label

**Terminal cover (IP20), available for 84.4 mm diameter tubular can type capacitors.**

**(Cable gland not available for use with these covers)**

| <b>TYPE</b>      | <b>ARTICLE NO.</b>    | <b>CAPACITOR Ø IN mm</b> |
|------------------|-----------------------|--------------------------|
| CAP84-88-IN-LINE | 5341-COV-84-88-IP20-7 | 84.4                     |

**Type CAP84-88-IN-LINE**

- Protection class IP20
- Protective cover prevents unintentional touching of live terminals
- Proper ventilation is provided by use of additional holes in the protective cover's top
- Six slots located on the cover, three on each side, allow easy IN-LINE connection between two

**TERMINAL COVER IP20: CAP84-IN-LINE**

**IN-LINE CONNECTION BETWEEN TWO CAPACITORS, IP20**

**3-PHASE CAPACITORS**
**IP20, DRY**
**RATED VOLTAGE 230 V, 50 Hz, DELTA CONNECTION, UL/ULC**

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKP-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

<sup>(1)</sup> Version no. xx may differ as it respects small changes, e.g. on the label

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKPg-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

<sup>(1)</sup> Version no. xx may differ as it respects small changes, e.g. on the label

**Notes**

- Other voltage ratings, outputs, and frequencies upon request. All PhMKP-type capacitors may be also be applied in 60 Hz networks, output and current will, however, be 20 % higher in these cases (i.e. additional thermal load and therefore, a lower class of temperature must be taken into account)

## ESTAdry D-Type, LVAC Power Capacitors

### FEATURES

- Self-healing technology
- Over pressure tear-off fuse
- Smallest available height for 50 kvar units: 210 mm (+68 mm for terminals)
- Excellent heat dissipation
- Screw-on terminal with M10 bolts
- Resin filling provides thermal conductivity similar to that of oil-filled capacitors
- Aluminum case is welded and hermetically sealed
- No paint required for OUTDOOR application
- UL and cUL approved

### APPLICATIONS

- Areas with dust and moisture, which require a high degree of protection and high creepage distances. Also for OUTDOOR
- Free standing, fixed individual-PFC (e.g. motors, lighting, transformers)
- Automatic central-PFC (e.g. group of loads)
- Harmonic trap (e.g. UPS, frequency drives, converter)
- Pole mounted PFC

## CAPACITORS IN TRIANGULAR CASING

### DESCRIPTION

The PhMKDg series capacitor in a triangular aluminum case with a standard rating of 50 kvar, augments Vishay ESTA broad line of reliable three-phase power capacitors. The PhMKDg series is preceded by our PhMKP and the ESTAdry PhMKPg series in aluminum tubular casings, with outputs up to 37 kvar, depending on their rated voltage.

The standard PhMKDg series capacitor is designed for indoor application, with externally arranged discharge resistors ( $U \leq 50 \text{ V}/60 \text{ s}$ ). For outdoor application, the discharge resistors can be incorporated internally ( $U \leq 75 \text{ V}/180 \text{ s}$ ). Also, the pure aluminum welded cases render these capacitors perfectly suitable for outdoor use.

The PhMKDg capacitor can be used for both controlled equipment and for stationary or mobile fixed compensation, e.g. for induction-motor-operated conveyer belts in the mining industry.

The indoor capacitor can be supplied with the option of a small protective cover for each individual connection or with an IP53-type overall protective cover.

The triangular case and corresponding triangular arrangement of the winding elements allows for simple connection in parallel of several units (IN-LINE). The joint insulation created by means of a solid ceramic terminal base with high surface-creepage resistance and very long tracking paths establishes an additionally superior mechanical stability for the three solid connector bolts.

With a resin filled pure aluminum case offering superior mechanical stability, low profile design, excellent thermal conductance, easy paralleling and a complete three-phase tear-off fuse system incorporated into the PhMKDg design, this series is the ideal first choice for new designs and applicable retrofit requirements.

## LVAC Power Capacitors

### FEATURES

- Self-healing technology
- Over pressure tear-off fuse
- Robust steel container
- Massive connection studs

### APPLICATIONS

- Areas with dust and moisture, which require a high degree of protection and high creepage distances
- Free standing, fixed individual-PFC (e.g. motors, lighting, transformers)
- Automatic central-PFC (e.g. group of loads)
- Harmonic trap (e.g. UPS, frequency drives, converter)

**CAPACITORS IN RECTANGULAR CASING****DESCRIPTION**

ESTAprop PhMKP-type capacitors in rectangular steel casing have been designed for power factor correction in low voltage plants. Loads as motors and transformers consume real power as well as reactive power. Generators, supply cables, and other electrical distribution equipment should be relieved from reactive power.

**DESIGN**

The ESTAprop MKP capacitor in steel casing consists of a number of three-phase tubular can type capacitors (see PhMKP... Cylindrical Aluminum). The individual aluminum cans are wired together and mounted onto a steel frame. The steel frame together with the cans is housed in a common sheet steel casing. The supply cable may be connected at three threaded studs, on top of the capacitor. A threaded stud M10 for grounding is available. Easy mounting will be ensured by 4 drillings, at the bottom of the container.

This design ensures highest safety by:

- self-healing technology
- over pressure tear-off fuse
- robust steel container
- massive connection studs

**Notes**

- Other voltage ratings, outputs, and frequencies upon request.  
All PhMKP-type capacitors may be used for 60 Hz, the output will be 1.2 times higher.
- All oil-impregnated part types can also be produced in a PhMKPg dry version. Dimensions and ratings are unchanged.  
Dry types are not standard stock items, with production upon request.
- (1) Can be used also for 415 V, with full overvoltage range.
- (2) Version no. xx may differ as it respects small changes, e.g. on the label.

## LVAC DW-Type Filter Capacitors

### FEATURES

- High output and high over-current design
- Welded rectangular capacitors with 3 or 6 terminals
- Overpressure monitoring device

### APPLICATIONS

- Automatic and individual fixed Power Factor Correction in LVAC applications
- Detuned and tuned filter applications to reduce harmonics in LVAC networks

## DW-FILTER TYPE CAPACITORS

### DESCRIPTION

ESTAprop and ESTAdry DW-type capacitors in rectangular steel or Aluminum casing have been designed for high current filter circuit applications in low voltage plants. Loads such as frequency drives, converters, and other non-linear loads create harmonics. The purpose of tuned and detuned filters is the protection of electrical equipment and reduction of harmonics. DW-type capacitors have an excellent current-carrying capability and may be built for high voltages as well as high loads within one casing.

DW-type capacitors may be used for:

- fixed detuned power factor correction equipment
- automatic detuned power factor correction equipment
- tuned filter circuits

### DESIGN

The DW-type capacitor is based on MKP-technology. The active element consists of metallized polypropylene film with self-healing properties. The current-carrying metal layer is vaporised onto one side of the polypropylene film. The front surface of tubular winding elements are joined by means of the metal spray method (scooping). A number of elements will be connected together to get the required capacitance. The entire winding package will be incorporated within a welded stainless steel casing.

The casing is fitted with hermetically sealed bushings M12, for connection of the supply cable.

A threaded stud M10 for grounding is provided. Easy mounting will be ensured by 4 drillings, Ø 9.8 mm, at the bottom of the container, or by side-brackets.

This design ensures the highest safety by self-healing technology as well as by an over pressure monitoring device. In case of an internal failure, an over pressure may occur and operate a potential-free contact, which will (connected to a switching device like a contactor) disconnect the capacitor from the supply and thus protect the capacitor from bursting.

### DW-TYPE CAPACITOR, IP00, 6 TERMINALS

### DW-TYPE CAPACITOR, IP00, 3 TERMINALS

| <b>TECHNICAL DATA</b>                                    |   |
|--|---|
| <b>STANDARDS</b>   | <b>IEC 60831-1 + 2, EN 60831-1 + 2, LATEST EDITIONS</b>   |
| Overvoltages<br>(in accordance with the above standards) | $U_{cn} + 10\%$ (up to 8 h daily)<br>$U_{cn} + 15\%$ (up to 30 min daily)<br>$U_{cn} + 20\%$ (up to 5 min, only 200 times in the life of the capacitor)<br>$U_{cn} + 30\%$ (up to 1 min, only 200 times in the life of the capacitor)<br><b>Please also refer to "Terms and Definitions".</b> |
| Overcurrent<br>(in accordance with the above standards)  | $1.3 \times In$ ,<br>$1.43 \times In$ with 10 % overvoltages, 10 % overcapacitance and harmonics included,<br>continuous operation<br><b>Please also refer to "Terms and Definitions".</b><br>Higher currents upon request!   |
| Tolerance on capacitance                                 | $\pm 5\%$ (very narrow tolerances of $\pm 3\%$ upon request)  |
| Test voltage, terminal/terminal                          | $2.15 \times U_{cn}$ , VAC, 2 s (routine test)  |
| Test voltage, terminal/casing                            | 3600/7200 ( $\leq > 660$ V) VAC, 2 s (routine test)   |
| Inrush current   | 300 times rated current   |
| Losses   | < 0.50 W/kvar (without discharge resistors)   |
| Statistical life expectancy                              | > 150 000 operating h   |
| Degree of protection                                     | IP00, indoor mounting   |
| Permitted ambient temperature                            | -25/up to D (max. 55 °C)  |
| Permitted casing temperature                             | Max. 65 °C (measured on top of the capacitor)   |
| Cooling  | Naturally air-cooled  |
| Permissible relative humidity                            | Max. 95 %   |
| Maximum allowed altitude                                 | 2000 m above sea level  |
| Mounting position  | Vertical or horizontal  |
| Mounting   | 4 drillings, Ø 9.8 mm   |
| Safety features  | Over pressure monitoring device, self-healing   |
| Casing   | Welded stainless sheet steel casing, color RAL 7033 or Aluminum casing (ESTAdry)  |
| Dielectric   | Polypropylene film, self-healing  |
| Filling agent  | Natural oil, non-PCB, biodegradable (ESTAprop) or dry/resin filled (ESTAdry)  |
| Terminals  | Threaded studs, M12   |

This capacitor type will be built upon customer request. With its narrow tolerances, it is ideal for use in filter circuit applications.

Available voltage ratings are between 230 V and 1000 V. Output ratings are up to 500 kvar, depending on the voltage.

Overcurrent loading in excess of standard figures is possible.

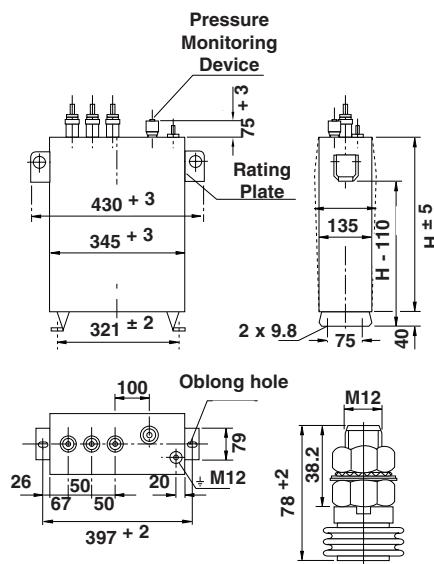

The protection of DW-type capacitors is provided by an OVER PRESSURE MONITORING DEVICE, which must be connected to a contactor or breaker to switch off the unit in case of internal over pressure.

## **DIMENSIONS FILTER CIRCUIT CAPACITORS**

The total output within one casing may be divided into two outputs and six bushings. Using such an "S"-type terminal arrangement may be of cost advantage when two outputs are required, but neither of them is large enough to fill up the capacitor casing.

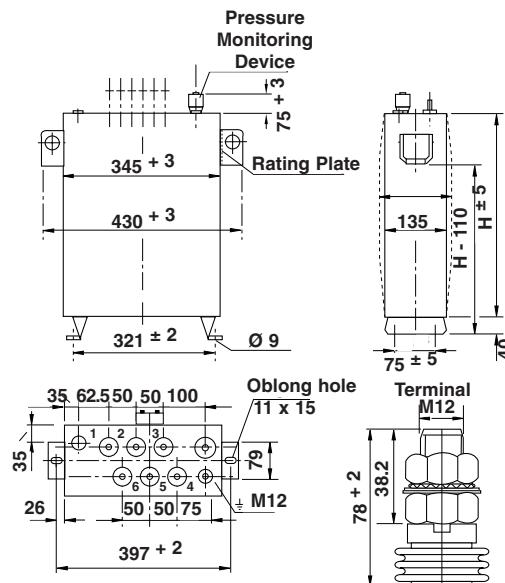

**Drawing 10**

DW-type with 3 terminals

**Drawing 11**

DW-type with 6 terminals

## **RECOMMENDED TORQUES**

| TERMINAL STYLE | RECOMMENDED TORQUE |
|----------------|--------------------|
| Terminals M6   | 3 Nm               |
| Terminals M8   | 6 Nm               |
| Terminals M10  | 10 Nm              |
| Terminals M12  | 15.5 Nm            |
